Fund Profile
Investment Objective

The Fund's investment objective is to generate both income and long term capital growth by investing in a diversified portfolio of securities, primarily in the global convertible market.

Key Facts

- Team of five sector specialists based in London and Connecticut
- The team has 120+ years of combined industry experience
- Typically 60-100 positions with geographic and sector diversification
- Fundamentally-driven convertible analysis. No benchmark constraints
- Ability to hedge interest rates

Performance for the USD Class I Acc. The class launched on 30 August 2013. Performance data is shown in USD. Source: Northern Trust International Fund Administration Services (Ireland) Ltd. Benchmark performance shown in USD. Source: Bloomberg. If this is not your local currency, exchange rate fluctuations may cause performance to increase or decrease when converted into your local currency. Performance data takes account of fees paid by the fund but does not take account of any commissions or costs you may pay when subscribing for or redeeming shares or any taxes or securities account charges that you may pay on your investment in the fund. Such charges will reduce the performance of your investment.

1. The benchmark name changed on 21 February 2020 to Refinitiv Global Focus Convertible Bond Index. Prior to 21 February 2020 the Fund's benchmark name was Thomson Reuters Global Focus Convertible Bond Index. This is a name change only due to a rebranding of company.

2. Historic yield is based on a NAV per share of US\$10.87 and income of US\$0.4875 per unit paid in the last 12 months, based on USD Institutional distribution units. **WARNING: Investors should note that historic yield does not measure the overall performance of a fund. It is possible for a fund to lose money overall but to have a positive historic yield. Historic yield cannot be considered as being similar to the interest rate an investor would earn on a savings account.**

Fund Managers' Comments

The Polar Capital Global Convertible Fund returned -0.98% in March, taking its return since inception to 52.10% (USD I Acc Share Class). In comparison, the Refinitiv Global Focus Convertible Bond Index (in dollar terms) returned -1.16% and 38.23%, respectively.

Macro background

Geopolitical tensions remained high in March as Ukrainian soldiers continued to defend against indiscriminate bombardment of domestic infrastructure and civilians by Russian forces, despite attempts at peace talks between the two countries. At the same time, western nations continued to provide defensive equipment to Ukrainian forces and implement punitive sanctions on the Russian economy and key personnel in an effort both to reduce the country's ability to finance the war and to mount pressure on its president, Vladimir Putin.

With Russia a behemoth in global oil and gas exports, as well as Russia and Ukraine historically producing and exporting a significant portion of global wheat demand, the conflict is resulting in a historic supply shock, notably in Europe which receives a significant portion of its energy from Russia. Against this backdrop, commodity prices remained elevated and volatile (S&P Agricultural Index (SPGAG) +6.1%; WTI +4.5%).

In addition, ongoing wage inflation due to tight labour supply in developed markets and continued supply-chain issues – with the latest headwind being China, the global centre of manufacturing, implementing lockdowns to try and control an increasing spread of Omicron – are adding to supply-side issues and placing upward pressure on already high inflation. Indeed, consumer prices rose by a record 7.9% in the US in February, the highest year-on-year increase since 1982.

While governments and central bankers are taking measures to soften the impact of rising inflation on consumers, especially those at the lower and middle-income spectrum who are being disproportionately affected, it is likely to provide only partial relief, with inflation set to rise further in the coming months.

In the US, President Biden announced the release of 180 million barrels of oil over six months from the country's strategic petroleum reserve – the largest ever release. This follows a failure of the US government to convince Saudi Arabia and the UAE to release more oil as the Middle Eastern countries punish the west for what they deem a lack of security commitment by the US following ongoing Iranian-backed Houthi attacks on oil infrastructure and concerns around a potential revival of the 2015 nuclear accord between the US and Iran.

In addition, western central banks are trying to keep inflation from spiralling higher by communicating their intention to move to a more neutral policy rate sooner. Indeed, following a 25bp interest rate hike in March, markets now expect the Federal Reserve to raise rates by 50bp in May and June, which would be the first increase of this magnitude since 2000. At the European Central Bank, inflation continues to dominate the debate, with the ECB recently presenting plans for a quicker reduction in its asset purchase plans this year to try to counter inflationary pressures. This led to a volatile month in financial markets, with commodities appreciating and bond prices falling as yields rose (UST 5yr yield: +74bp to 2.46%). Regarding the latter, it was also notable that the yield curve inverted along the two-year and ten-year tenor (2's10's) as policy expectations drove short-dated yields higher than their longer-dated counterparts. This inversion is typically taken as a signal that monetary policy is set to become too restrictive, thereby choking economic growth and

leading to a recession. For this reason, it is a closely watched and oft-talked about data point, albeit one that historically forecasts recessions with an unreliable time lag.

Perhaps surprisingly, equity markets fared generally well against this turbulent backdrop, with many indices moving higher (S&P500: +3.6%; Eurostoxx600: +0.6%; Topix: +3.2%). Market commentators suggest this price movement is likely due more to technical rather than fundamental factors, with the late-February price action suggesting markets had fallen too far too quickly and consequently were oversold and due a near-term rebound.

Fund performance

The Fund outperformed its benchmark in March, benefitting from the broader rise in equity markets but suffering from rising rates. By sector, materials were the largest contributor to performance during the month as this sector was supported by the geopolitical landscape. Conversely, consumer discretionary was the largest detracting sector from performance as fears of a slowdown in cyclical consumer spending amid rising prices and negative real-wage growth pressured the outlook for several of our investments.

By individual investment, the three largest contributors to performance during the month were MP Materials, Vertex Energy and Gaztransport.

MP Materials is the sole US-based rare-earth minerals miner, mining Neodymium (Nd) and Praseodymium (Pr), collectively NdPr. As a major basis of permanent magnets, demand has been and is expected to continue to grow rapidly due to electrification, particularly in the automotive and renewable energy sectors. This, combined with possible geopolitical-related supply disruption due to tensions between the US and China (China is the largest producer of rare-earth minerals) has caused NdPr prices to surge in recent times, benefitting MP Materials.

Vertex Energy is a high-conviction fundamental trade dependent on the completion of a merger. In the event of completion, we believe there to be significant upside potential in the stock. However, while financial risk has been substantially reduced following the recent convertible offering, there remains operational risk. Consequently, the Fund owns the position in a risk-controlled size. Nevertheless, the stock rose significantly in March and contributed well to performance.

Gaztransport is a French engineering company that offers membrane solutions for the transportation and storage of liquified natural gas (LNG). Against the turbulent geopolitical backdrop, LNG sourcing is of strategic sovereign importance resulting in altering supply chains and consequently greater longer-term demand for Gaztransport's products.

The three largest detractors to performance during the month were Dufry, Jet2, and International Airlines Group (IAG).

Dufry, the Swiss duty-free operator, Jet2, the provider of packaged holidays and low-cost airline, and IAG, the European airline group that owns British Airways, Iberia, Aer Lingus and Vueling, saw their shares decline in March as the outlook for consumer discretionary spending weakened during the month. Moreover, airlines are also contending with the impact of higher fuel costs on margins.

Finally, we would highlight that several Russian companies have issued convertible bonds in recent years, totally approximately \$2.4bn nominal. With their shares suspended from trading, these convertibles have had their 'delisting event' clauses triggered, enabling convertible bond holders to demand full redemption

It should not be assumed that recommendations made in future will be profitable or will equal performance of the securities in this document. A list of all recommendations made within the immediately preceding 12 months is available upon request.

of their debt (par put). Bond holder groups appear to be forming to try and work out an amicable solution with the issuers given it seems each of these issuers would be unable to satisfy the par put redemption notice. As mentioned in our last fact sheet commentary, the Fund did not have any exposure to these names during this period and this remains the case as of the time of writing.

Outlook

We remain cautious on the outlook for financial markets in the months ahead. We believe there is a distinct possibility of increasing inflation contemporaneous with slowing growth as inflationary pressures from higher food and energy prices, labour market strength and supply-chain tightness combine with weakening consumer purchasing power as, despite wage growth amid tight labour markets, wage growth has failed to keep up with consumer prices meaning many employees have suffered negative real wage growth for almost three years. Moreover, much of the Covid-related stimulus cushion has been depleted. Taken together, the supply shock and decreasing ability of companies to pass higher costs onto consumers may present downside risks to earnings growth in the months ahead.

At the same time, markets must contend with growing central bank hawkishness, leading to greater interest rate hikes and a more rapid reduction of central bank balance sheets. We believe that since the global financial crisis more than a decade ago, financial market valuations have been greatly supported by central bank actions. That is, central bank asset purchases have artificially suppressed interest rates, which have reduced the return on offer by less risky instruments. This, in turn, has forced investors into riskier instruments in order to seek higher returns, thus lowering their volatility and inflating their prices. As central banks reverse course by taking liquidity out of the system and raising interest rates – both of which are only now starting or about to start – in order to combat higher inflation, we see no reason to believe their consequences will not have a similarly reverse effect on markets. That is, greater volatility and valuation pressure.

Against this backdrop, we believe security selection is likely to become increasingly important, in particular selecting securities that have high credit quality to mitigate downside risk while being able to benefit from a higher volatility environment.

We believe the convertible market is well placed to benefit from this turbulent macroeconomic backdrop. This is because of the current profile of the convertible market, with many convertible bonds trading at or near their bond floors, providing strong downside protection with good longer-term upside optionality.

Please note the Institutional USD Distributing Share Class goes ex its quarterly dividend on 1 April 2022, paying out \$0.1143.

Risks

- Capital is at risk and there is no guarantee the Fund will achieve its objective. Investors should make sure their attitude towards risk is aligned with the risk profile of the Fund.
- Past performance is not a reliable guide to future performance. The value of investments may go down as well as up and you might get back less than you originally invested.
- The value of a fund's assets may be affected by uncertainties such as international political developments, market sentiment, economic conditions, changes in government policies,

restrictions on foreign investment and currency repatriation, currency fluctuations and other developments in the laws and regulations of countries in which investment may be made. Please see the Fund's Prospectus for details of all risks.

- The Fund may enter into a derivative contract. The Fund's use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as failure amongst market participants.

- The use of derivatives will result in the Fund being leveraged (where market exposure and the potential for loss exceeds the amount the Fund has invested) and in these market conditions the effect of leverage will magnify losses. The Fund makes extensive use of derivatives.
- If the currency of the share class is different from the local currency in the country in which you reside, the figures shown in this document may increase or decrease if converted into your local currency.
